

Antigua and Barbuda

Country report card - adults

This report card contains the latest data available on the Global Obesity Observatory on overweight and obesity for adults. Where available, data on common and relevant obesity drivers and comorbidities are also presented.

View the latest version of this report on the Global Obesity Observatory at https://data.worldobesity.org/country/antigua-and-barbuda-6/.

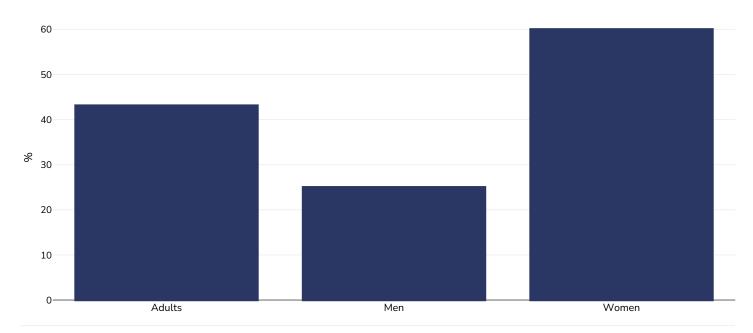

Contents	Page
Obesity prevalence	3
Double burden of underweight & overweight	4
Insufficient physical activity	5
Estimated per capita fruit intake	8
Estimated per-capita processed meat intake	9
Estimated per capita whole grains intake	10
Mental health - depression disorders	11
Mental health - anxiety disorders	14
Raised blood pressure	17
Raised cholesterol	20
Raised fasting blood glucose	23
Diabetes prevalence	25

Obesity prevalence

Adults, 1993

Survey type: Measured
Age: 40+

References:

Ministry of Health Data 1993, from Antigua & Barbuda, FAO Nutrition Country Profile

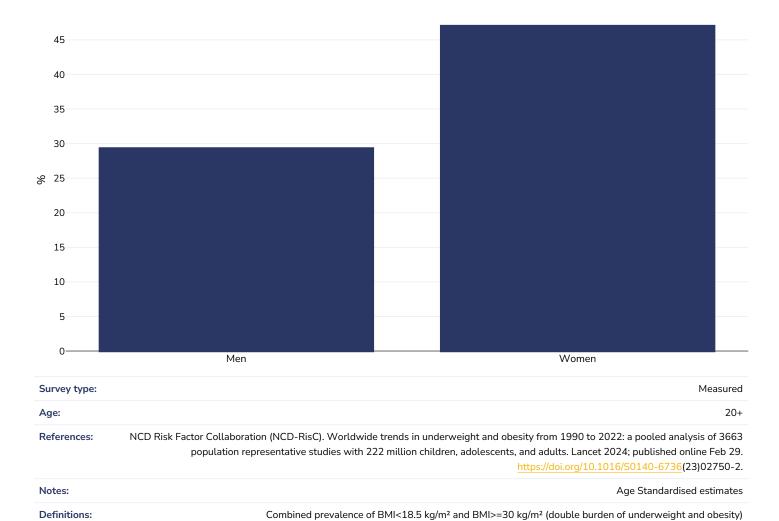

Notes:

Sample size not specified NB. Combined adult data estimated. These estimates were calculated by weighting male and female survey results. Weighting based on World Bank Population % total female 2019 (https://data.worldbank.org/indicator/SP.POP.TOTL.FE.ZS - accessed 30.09.20)

 $Unless \ otherwise \ noted, overweight \ refers \ to \ a \ BMI \ between \ 25kg \ and \ 29.9kg/m^2, obesity \ refers \ to \ a \ BMI \ greater \ than \ 30kg/m^2.$

Double burden of underweight & overweight

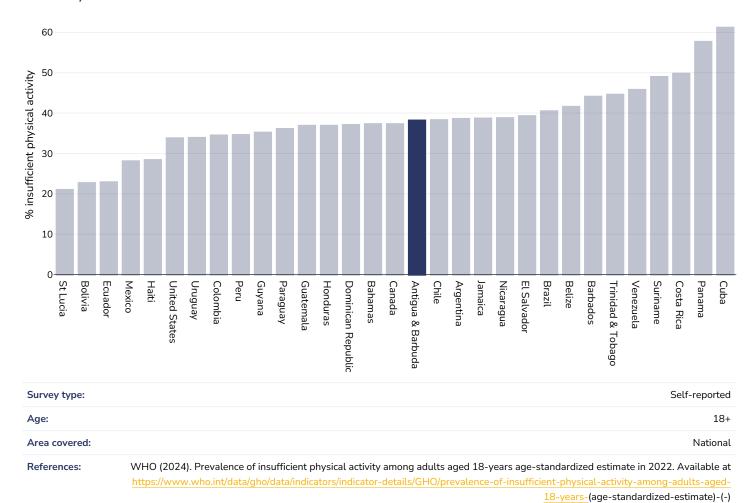

Insufficient physical activity

Adults, 2022

Definitions:

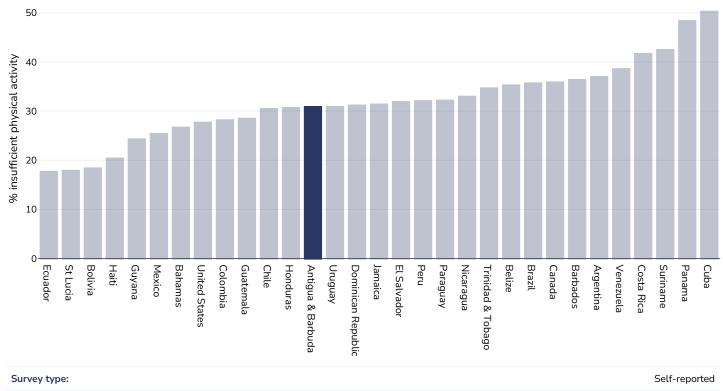

Percent of population attaining less than 150 minutes of moderate-intensity physical activity per week, or less than 75 minutes of

vigorous-intensity physical activity per week, or equivalent.

vigorous-intensity physical activity per week, or equivalent.

Men, 2022

		uda	ublic	Ğ	
Survey type:					Self-reported
Age:					18+
Area covered:					National
References:	WHO (2024). Prevalence of insufficient physical activity among adults aged 18-years age-standardized estimate in 2022. Available at				

vigorous-intensity physical activity per week, or equivalent.

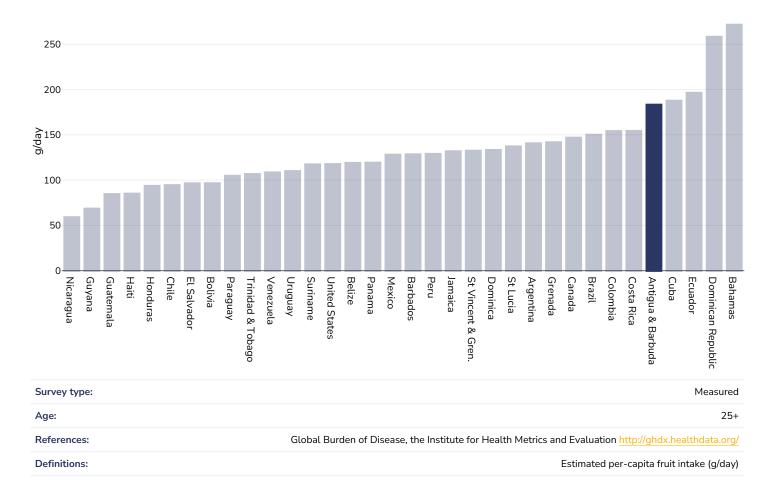

Women, 2022

Survey type:	Self-reported
Age:	18+
Area covered:	National
References:	WHO (2024). Prevalence of insufficient physical activity among adults aged 18-years age-standardized estimate in 2022. Available at https://www.who.int/data/gho/data/indicators/indicator-details/GHO/prevalence-of-insufficient-physical-activity-among-adults-aged-18-years- (age-standardized-estimate)-(-)
Definitions:	Percent of population attaining less than 150 minutes of moderate-intensity physical activity per week, or less than 75 minutes of

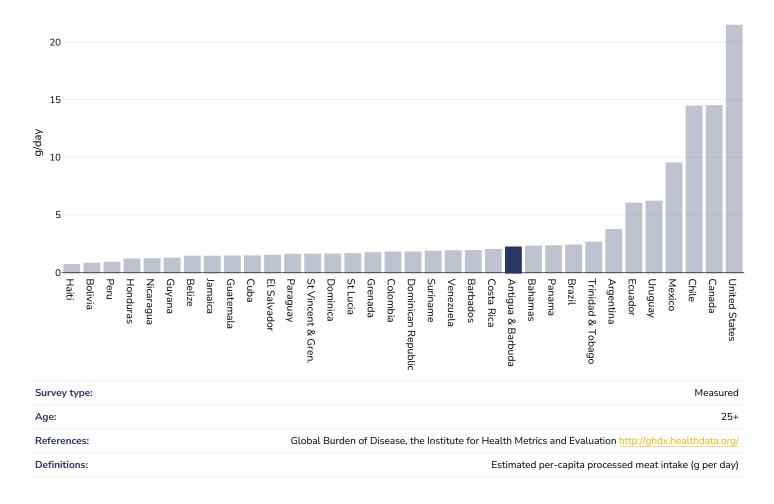

Estimated per capita fruit intake

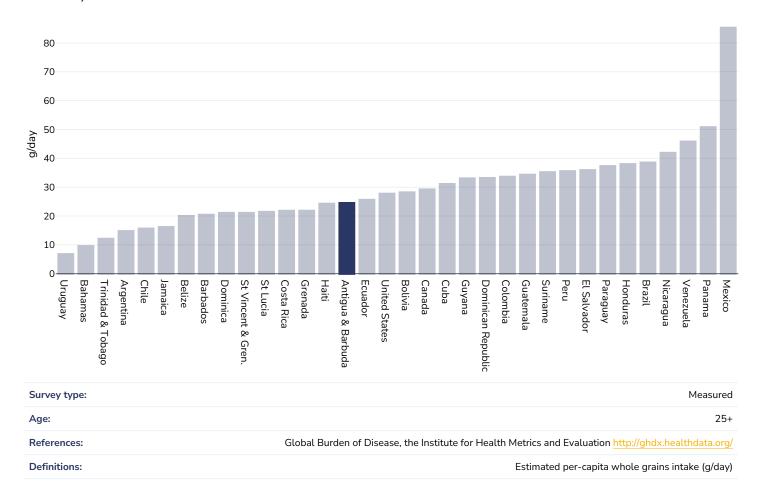

Estimated per-capita processed meat intake

Estimated per capita whole grains intake

Mental health - depression disorders
