Economic classification: Lower Middle Income

## **Health systems summary**

Healthcare in Bangladesh is pluralistic, delivered by 4 providers: the government, non-governmental organisations, the private sector and donor agencies. Although care in the public sector is technically available to all Bangladeshi citizens and highly subsidised by the government, the quality of care is considered to be poor, a consequence of insufficient funding and governance. As a result, the private sector (made up of formal, traditional services and informal, less traditional services) has thrived, benefitting from limited regulation. Private care in Bangladesh is expensive, and so unaffordable for much of the population. Out of pocket payments are estimated to make up 63.3% of total health expenditure, with government expenditure making up just 26%. Insurance (social or private) is uncommon in Bangladesh.

The Bangladeshi health system is challenged by an insufficient health workforce, its inadequate public system, the high number of informal providers in rural areas, lack of effective risk-pooling and low financial investment. At the same time, Bangladesh is experiencing the double burden of communicable and non-communicable diseases and great demographic changes.

#### **Indicators**

| Where is the country's government in the journey towards defining 'Obesity as a disease'?  | Some progress |
|--|---------------|
| Where is the country's healthcare provider in the journey towards defining 'Obesity as a disease'?                                       | No            |
| Is there specialist training available dedicated to the training of health professionals to prevent, diagnose, treat and manage obesity? | No            |
| Have any taxes or subsidies been put in place to protect/assist/inform the population around obesity?                                    | Yes           |
| Are there adequate numbers of trained health professionals in specialties relevant to obesity in urban areas?                            | No            |
| Are there adequate numbers of trained health professionals in specialties relevant to obesity in rural areas?                            | No            |
| Are there any obesity-specific recommendations or guidelines published for adults?   | No            |
| Are there any obesity-specific recommendations or guidelines published for children?   | Some progress |
| In practice, how is obesity treatment largely funded?  | Out of pocket |

### Perceived barriers to treatment

Lack of political will, interest and action

Lack of training for healthcare professionals

Resistance to innovation

Poor health literacy and behaviour

Lack of evidence, monitoring and research

## **Summary of stakeholder feedback**

Neither the government nor healthcare providers in Bangladesh are considered to act as if obesity is a disease. As obesity is not considered a disease by healthcare providers and patients, the stakeholder reported that people only enter the health system when they have a comorbidity related to obesity. Even then, they receive no treatment for their obesity unless they go private. This is because there is no funded obesity treatment within the public sector, leaving all obesity care to be provided by the private sector. There is said to be several private clinics and dietary care services available, but these are mostly situated in urban areas and so not accessible to those living in rural regions. When treatment is provided it is said to be as 'beauty management' rather than because obesity is a disease.

While there is an NCD strategy (that is accompanied by an implementation guide), it noted that there is no focus in it on obesity. There is also no obesity treatment guidelines or recommendations, or training for obesity specialists. This is despite recent research showing that obesity and its related diseases are increasing in Bangladesh. There is also a growing concern about childhood obesity.

Based on interviews/survey returns from 1 stakeholder
