## Policies, Interventions and Actions

### Commercial Determinants of Noncommunicable Diseases in the WHO European Region

This report highlights the substantial impact of commercial determinants on noncommunicable diseases (NCDs) in the WHO European Region. Nearly 7500 deaths per day in the Region are attributed to commercial determinants, such as tobacco, alcohol, processed food, fossil fuels and occupational practices. These commercial products and practices contribute to 25% of all deaths in the Region. The report’s chapters systematically explore various facets of how commercial interests exacerbate NCDs and key strategies used by commercial actors to negatively influence NCD-related policies at the national and international level. The report also provides selected case studies from the Region to illustrate key strategies and outcomes of industry influence on health policies. The report then calls for urgent and coordinated action to address the commercial determinants of NCDs. It advocates for building coalitions based on the values of equity, sustainability, and resilience. Public health actors are urged to develop competencies in economic and legal frameworks, enforce transparency, and manage conflicts of interest effectively. The report underscores the need for robust financial reforms and strict regulation to curb industry power and protect public health. By implementing these strategies, the Region can accelerate progress towards global NCD targets and Sustainable Development Goals by 2030.

## European practical and patient-centred guidelines for adult obesity management in primary care

This article aims to provide obesity management guidelines specifically tailored to GPs, favouring a practical patient-centred approach. The focus is on GP communication and motivational interviewing as well as on therapeutic patient education. The new guidelines highlight the importance of avoiding stigmatization, something frequently seen in different health care settings. In addition, managing the psychological aspects of the disease, such as improving self-esteem, body image and quality of life must not be neglected.

## School Fruit, Vegetables and Milk Scheme

"Applicable since 1 August 2017, the EU school fruit, vegetables and milk scheme combines two previous schemes (the school fruit and vegetables scheme and the school milk scheme) under a single legal framework for more efficiency and an enhanced focus on health and educational. The scheme supports the distribution of products, educational measures and information measures. The scheme supports the distribution of fruit, vegetables, milk and certain milk products to schoolchildren, from nursery to secondary school. EU countries approve a list of products (in collaboration with their health and nutrition authorities) which will help achieve the schemes objective of helping children to follow a healthy diet. Priority is for fresh fruit and vegetables and for plain milk. In order to support a varied diet and/or specific nutritional needs, EU countries may also make processed fruit and vegetables such as juices and soups and certain milk products such as yoghurt and cheese, available. Additionally, under stricter conditions, milk-based drinks may be included." - EU Commission

## Health Promoting School Program

The program brings together schools for which health does not only mean the absence of disease, but they perceive it as a result of interacting bio - psycho - social factors, the so - called holistic concept of health, which also corresponds to the WHO concept. Schools try to develop these factors by respecting the natural needs of the individual, promoting communication, cooperation, emphasis on responsibility for their own health and developing the life competencies of all members of the school community.

## EU health and nutrient claims regulation

Regulation n° 1924/2006 establishes EU-wide rules on the use of specified health and nutrient claims. The European Commission approves claims provided they are based on scientific evidence and accessible consumers. The European Food Safety Authority is responsible for evaluating the scientific evidence supporting health claims. Nutrition claims may only be used on food defined as "healthy" by a nutrient profile.

## Nebud' pecka

One of the European Youth Tackling Obesity (EYTO) projects, Nebud' pecka was a campaign based in Prague, Czech Republic. The campaign title relates to being active, moving and having an interest in life. The most successful element of the NebuÄipecka campaign was interactive lectures in school settings, where young people shared newly acquired information with their peers in an attractive way. Trying new sports and support and changing eating habits formed part of this campaign.
