Policies, Interventions and Actions

Commercial Determinants of Noncommunicable Diseases in the WHO European Region

This report highlights the substantial impact of commercial determinants on noncommunicable diseases (NCDs) in the WHO European Region. Nearly 7500 deaths per day in the Region are attributed to commercial determinants, such as tobacco, alcohol, processed food, fossil fuels and occupational practices. These commercial products and practices contribute to 25% of all deaths in the Region. The report’s chapters systematically explore various facets of how commercial interests exacerbate NCDs and key strategies used by commercial actors to negatively influence NCD-related policies at the national and international level. The report also provides selected case studies from the Region to illustrate key strategies and outcomes of industry influence on health policies. The report then calls for urgent and coordinated action to address the commercial determinants of NCDs. It advocates for building coalitions based on the values of equity, sustainability, and resilience. Public health actors are urged to develop competencies in economic and legal frameworks, enforce transparency, and manage conflicts of interest effectively. The report underscores the need for robust financial reforms and strict regulation to curb industry power and protect public health. By implementing these strategies, the Region can accelerate progress towards global NCD targets and Sustainable Development Goals by 2030.

Nordic Nutrition Recommendations

The Nordic Nutrition Recommendations (NNR) is an international collaboration among health and food authorities in Denmark, Finland, Iceland, Norway, and Sweden. The NNR2023 project has developed science advice based on the health effects of foods and response to the country-specific public health challenges and burden of diseases, food consumption patterns, as well as the country-specific environmental impacts of food consumption. As obesity is a major cause of morbidity and mortality in the Nordic and Baltic countries, the NNR2023 report has special focus on the role of the diet for obesity, and the consequences of the present weight status on national DRVs and FBDGs.

Food-based dietary guidelines

The Official Dietary Guidelines – good for health and climate (published 2021) were developed in a process led by the Danish Veterinary and Food Administration, under the Ministry of Food, Agriculture and Fisheries. The development process also involved the Danish Ministry of Climate, Energy and Utilities, the Danish Health Authority, the National Food Institute at the Technical University of Denmark (DTU), as well as consumer organizations, non-governmental organizations and the food- and retail industry. The dietary guidelines are endorsed by the Ministry of Food, Agriculture and Fisheries.

European practical and patient-centred guidelines for adult obesity management in primary care

This article aims to provide obesity management guidelines specifically tailored to GPs, favouring a practical patient-centred approach. The focus is on GP communication and motivational interviewing as well as on therapeutic patient education. The new guidelines highlight the importance of avoiding stigmatization, something frequently seen in different health care settings. In addition, managing the psychological aspects of the disease, such as improving self-esteem, body image and quality of life must not be neglected.

School Fruit, Vegetables and Milk Scheme

"Applicable since 1 August 2017, the EU school fruit, vegetables and milk scheme combines two previous schemes (the school fruit and vegetables scheme and the school milk scheme) under a single legal framework for more efficiency and an enhanced focus on health and educational. The scheme supports the distribution of products, educational measures and information measures. The scheme supports the distribution of fruit, vegetables, milk and certain milk products to schoolchildren, from nursery to secondary school. EU countries approve a list of products (in collaboration with their health and nutrition authorities) which will help achieve the schemes objective of helping children to follow a healthy diet. Priority is for fresh fruit and vegetables and for plain milk. In order to support a varied diet and/or specific nutritional needs, EU countries may also make processed fruit and vegetables such as juices and soups and certain milk products such as yoghurt and cheese, available. Additionally, under stricter conditions, milk-based drinks may be included." - EU Commission

Tax of saturated fat (part of the Danish Tax Reform 2010)

As part of the Tax Reform 2010, Denmark introduced a 'fat tax' in 2011 - a tax of Dkr 16 (â,–2.15) per kg of saturated fat, with the taxable base including all foods containing saturated fat. The actual aims of the reform was to increase labour supply in the medium to long term and at same time contribute to soften the effects of the global economic crises in the short run. Furthermore net savings should be increased and goals in the areas of energy, climate, environment and health are supported. Note that the tax was discontinued in January 2013.

Danish Whole Grain Campaign (Fuldkornskampagnen)

"The Danish Whole Grain Partnership was created due to a growing concern about a decreasing whole grain intake in the Danish population in the mid-2000. Some of the future partners were concerned about the increasing popularity of low-carb, high-fat diets (e.g. Atkins) that seemed to be part of a general trend leading to a significant decline in the intake of whole grain breads. At the same time, millers, bread producers, and bakeries were experiencing weakened (declining) demand for their products. In parallel with this development, non-governmental organizations (NGO's) became increasingly aware of the growing evidence on the health benefits of whole grains. Together, these factors provided a window of opportunity for the establishment of a new partnership to promote whole grain consumption in Denmark. The partnership was established in 2008."

EU health and nutrient claims regulation

Regulation n° 1924/2006 establishes EU-wide rules on the use of specified health and nutrient claims. The European Commission approves claims provided they are based on scientific evidence and accessible consumers. The European Food Safety Authority is responsible for evaluating the scientific evidence supporting health claims. Nutrition claims may only be used on food defined as "healthy" by a nutrient profile.
