## Country report card - children

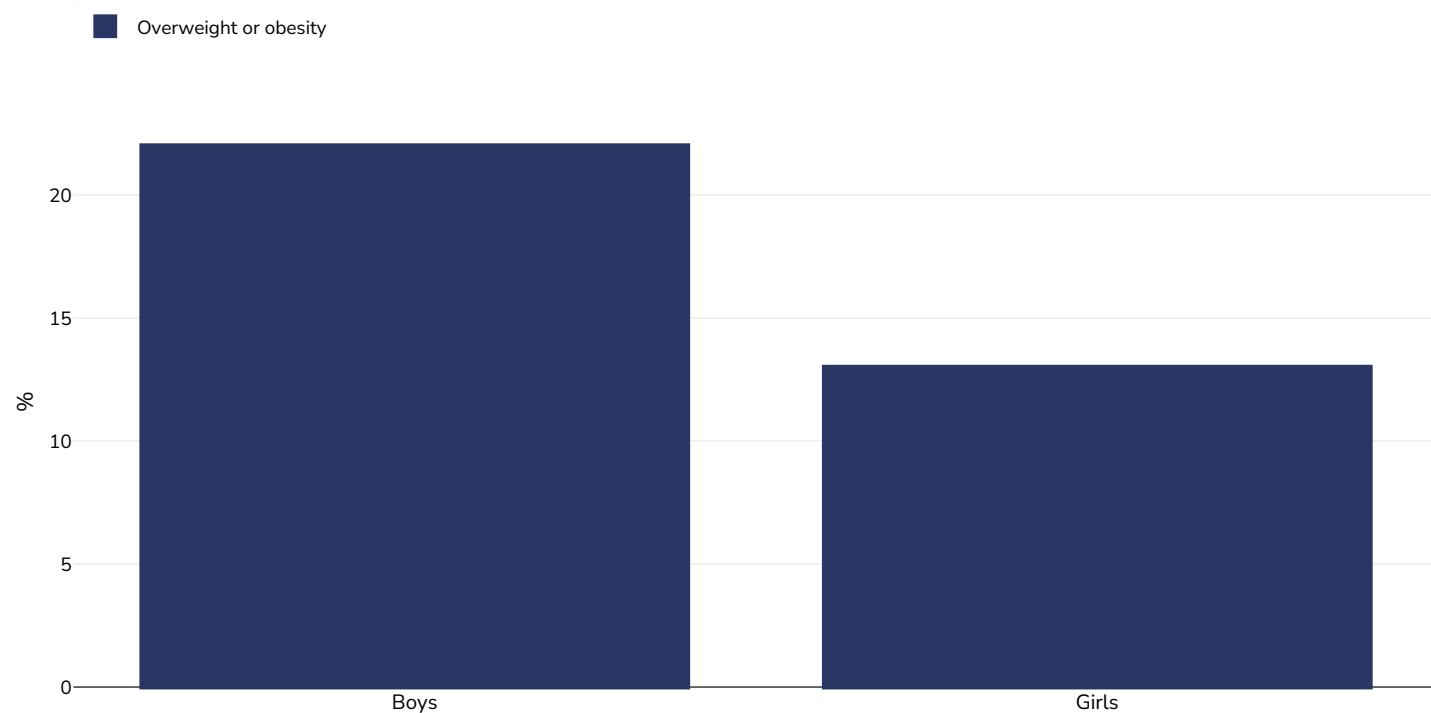

*This report card contains the latest data available on the Global Obesity Observatory on overweight and obesity for children, including adolescents (aged 5 to 18 years). Where available, data on common and relevant obesity drivers and comorbidities are also presented.*

*View the latest version of this report on the Global Obesity Observatory at <https://data.worldobesity.org/country/france-71/>.*

Contents	Page
Obesity prevalence	3
Overweight/obesity by education	4
Overweight/obesity by age	6
Overweight/obesity by region	7
Overweight/obesity by socio-economic group	8
Double burden of underweight & overweight	10
Insufficient physical activity	11
Prevalence of at least daily carbonated soft drink consumption	13
Prevalence of less than daily fruit consumption	15
Prevalence of less than daily vegetable consumption	16
Mental health - depression disorders	17
Mental health - anxiety disorders	20

## Obesity prevalence

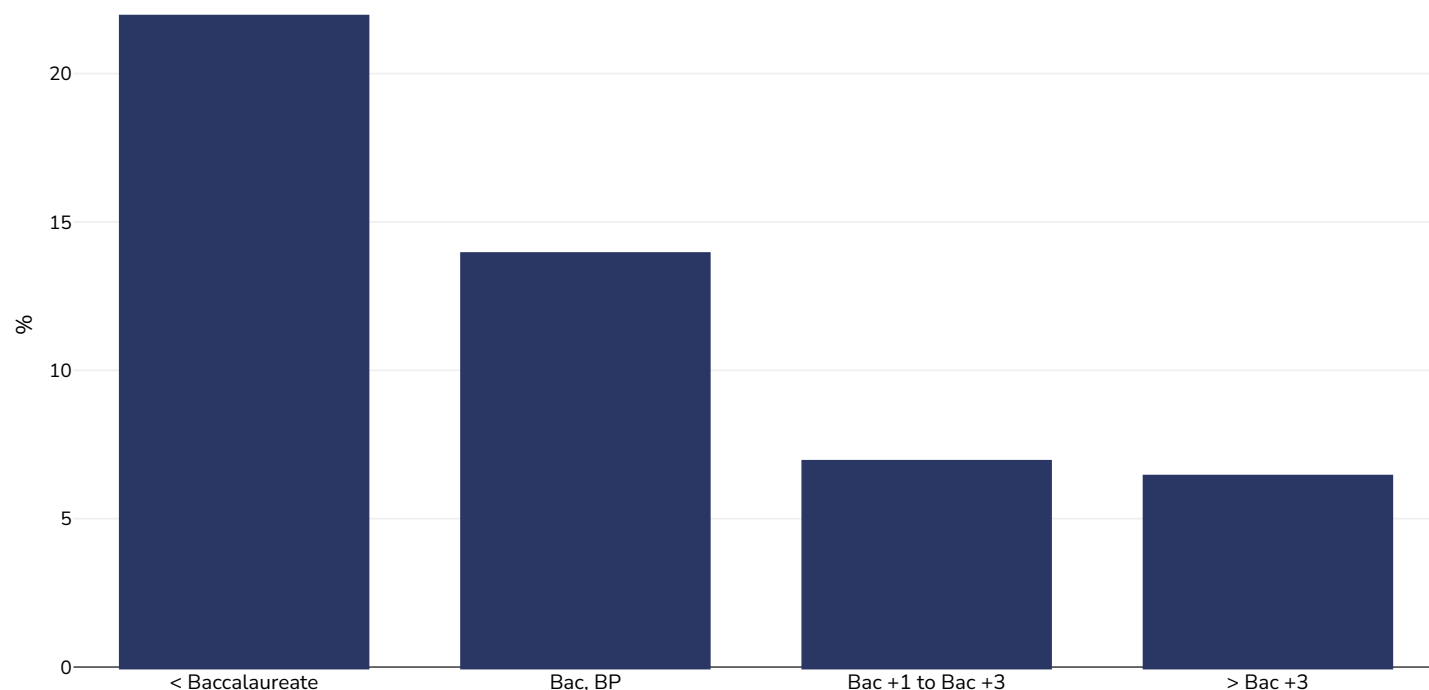

### Children, 2021-2022

Survey type:	Self-reported
Age:	13
References:	Rakic JG, Hamrik Z, Dzielska A, Felder-Puig R, Oja L, Bakalár P et al. A focus on adolescent physical activity, eating behaviours, weight status and body image in Europe, central Asia and Canada. Health Behaviour in School-aged Children (HBSC) international report from the 2021/2022 survey. Volume 4. Copenhagen: WHO Regional Office for Europe; 2024. 'Any translation was not created by the World Health Organization (WHO). WHO is not responsible for the content or accuracy of this translation. The original English edition shall be the binding and authentic edition'
Notes:	HBSC aims to survey approximately 1500 pupils per age group in each country or region (totaling around 4500)
Cutoffs:	+2SD

## Overweight/obesity by education

### Boys, 2015

Survey type: Measured

Age: 6-17

Sample size: 1,104

Area covered: National

Notes: < Baccalaureate = no diploma or certificate of primary studies, Bac, BP = general, technological or vocational baccalaureate, professional or technician, BEA, BEC, EIB, BEH, legal capacity, Bac +1 to Bac +3 = 1st cycle university diploma, bac +3, bachelor's degree, BTS, DUT, DEUG, diploma in social or health professions, diploma in nursing, > Bac +3 = 2nd or 3rd cycle diploma university [including medicine, pharmacy, dental], master, doctorate, engineering degree, diploma of a large school.

Definitions: Parental education.

Cutoffs: IOTF

## Girls, 2015

Survey type: Measured

Age: 6-17

Sample size: 1,104

Area covered: National

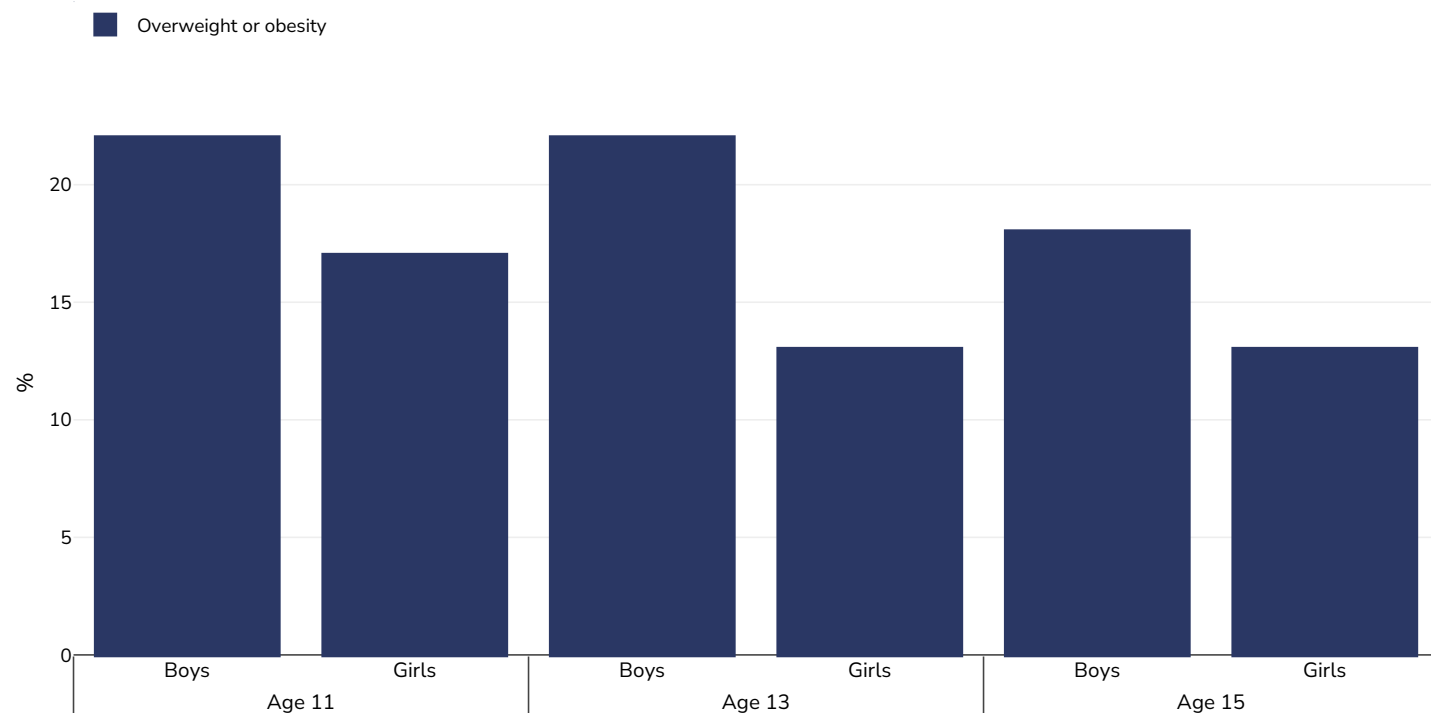

**Notes:** < Baccalaureate = no diploma or certificate of primary studies, Bac, BP = general, technological or vocational baccalaureate, professional or technician, BEA, BEC, EIB, BEH, legal capacity, Bac +1 to Bac +3 = 1st cycle university diploma, bac +3, bachelor's degree, BTS, DUT, DEUG, diploma in social or health professions, diploma in nursing, > Bac +3 = 2nd or 3rd cycle diploma university [including medicine, pharmacy, dental], master, doctorate, engineering degree, diploma of a large school.

**Definitions:** Parental education.

**Cutoffs:** IOTF

## Overweight/obesity by age

### Children, 2021-2022

Survey type: Self-reported

Area covered: See Report

**References:** Rakić JG, Hamrik Z, Dzielska A, Felder-Puig R, Oja L, Bakalár P et al. A focus on adolescent physical activity, eating behaviours, weight status and body image in Europe, central Asia and Canada. Cutoffs:	+2SD

## Double burden of underweight & overweight

### Children, 2022

Survey type:	Measured
Age:	5-19
References:	NCD Risk Factor Collaboration (NCD-RisC). Worldwide trends in underweight and obesity from 1990 to 2022: a pooled analysis of 3663 population representative studies with 222 million children, adolescents, and adults. Lancet 2024; published online Feb 29. <a href="https://doi.org/10.1016/S0140-6736(23)02750-2">https://doi.org/10.1016/S0140-6736(23)02750-2</a> .
Notes:	Age standardised estimates
Definitions:	Combined prevalence of BMI < -2SD and BMI > 2SD (double burden of thinness and obesity)
Cutoffs:	BMI < -2SD and BMI > 2SD

## Insufficient physical activity

### Boys, 2022

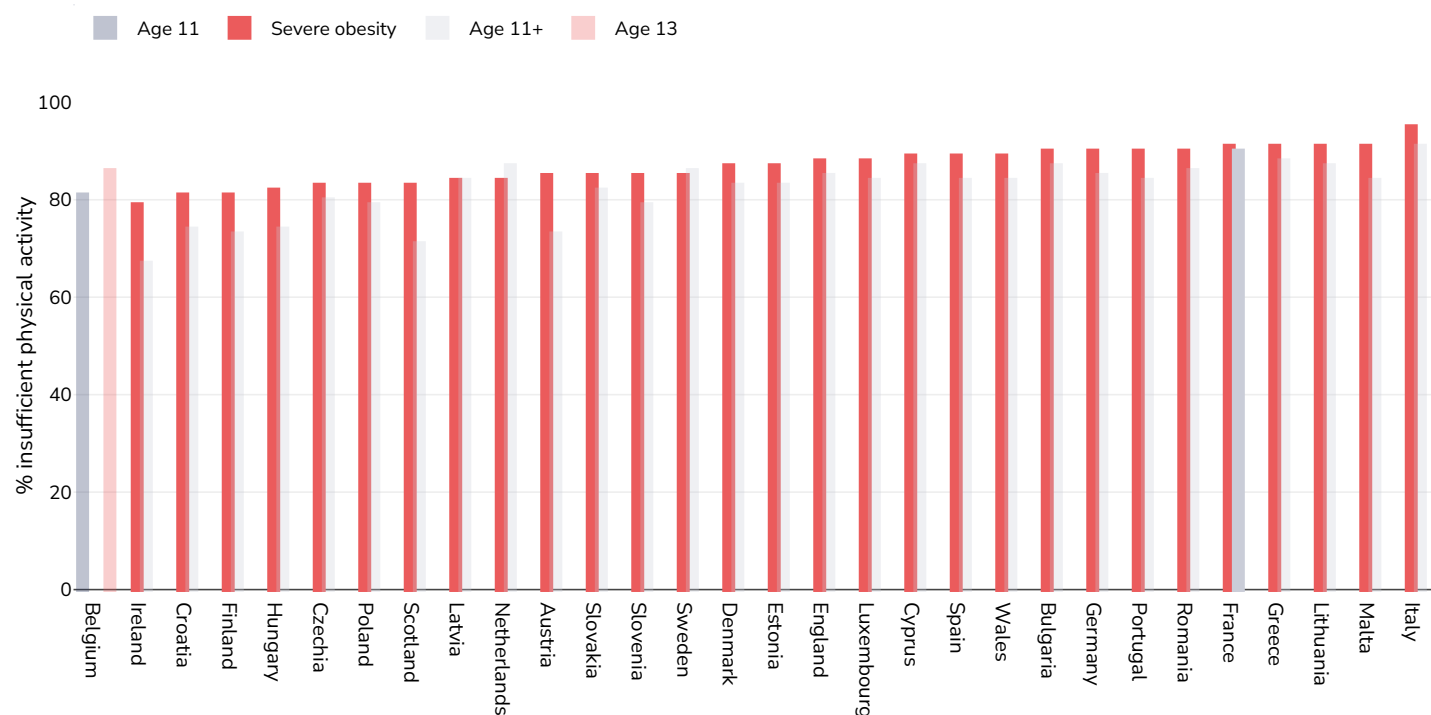

**References:** Rakić JG, Hamrik Z, Dzielska A, Felder-Puig R, Oja L, Bakalár P et al. A focus on adolescent physical activity, eating behaviours, weight status and body image in Europe, central Asia and Canada. Health Behaviour in School-aged Children international report from the 2021/2022 survey. Volume 4. Copenhagen: WHO Regional Office for Europe; 2024. Licence: CC BY-NC-SA 3.0 IGO. Health Behaviour in School-aged Children study (2023), Data browser (findings from the 2021/22 international HBSC survey): <https://data-browser.hbsc.org>.

**Notes:** Young people were asked to report the number of days over the past week during which they were physically active for a total of at least 60 minutes. The question was introduced by text defining moderate-to-vigorous physical activity (MVPA) as any activity that increases the heart rate and makes the person get out of breath some of the time, with examples provided. Findings presented on the Observatory show the proportions who report less than 60 minutes of MVPA daily.

**Definitions:** % reporting less than 60 minutes of MVPA daily

## Girls, 2022

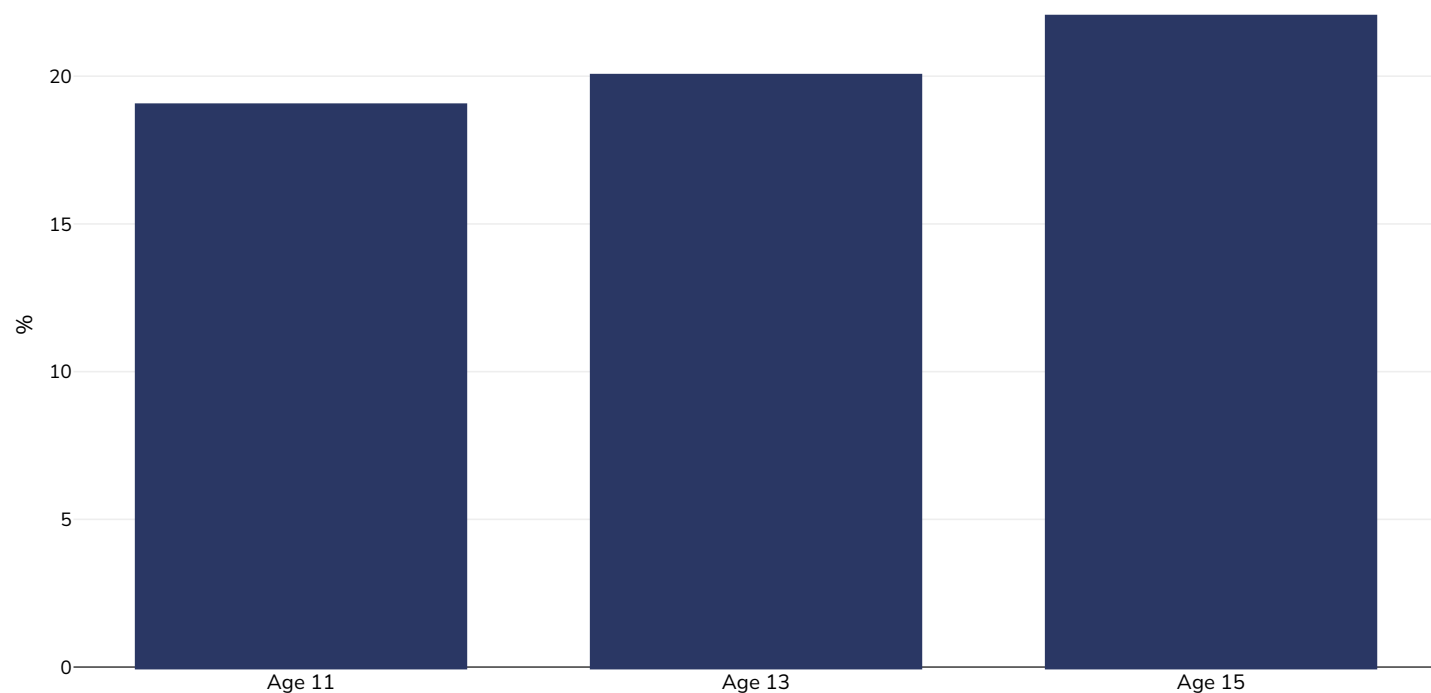

**References:** Rakić JG, Hamrik Z, Dzielska A, Felder-Puig R, Oja L, Bakalár P et al. A focus on adolescent physical activity, eating behaviours, weight status and body image in Europe, central Asia and Canada.
