National Action Plan and Monitoring Framework for Prevention and Control of NCDs in India

The National Action Plan and Monitoring Framework was developed as a consequence of World Health Organization's™ comprehensive Global Monitoring Framework for Prevention and Control of Non-communicable diseases (2013-2020) by setting 9 voluntary targets and 25 voluntary indicators for 2025. India, as a WHO member state, with all the national stakeholders, evaluated the existing NCD surveillance system leading to the establishment of an advisory group that developed National Action Plan and Monitoring Framework for Prevention of NCDs in 2013. This framework has resulted in setting of 10 targets and 21 indicators for 2025 to track the progress of actions designed to prevent and control NCDs in India.

National Nutrition Strategy

The National Nutrition Strategy is committed to ensuring that every child, adolescent girl and woman attains optimal nutritional status- especially those from the most vulnerable communities. The focus is on preventing and reducing undernutrition across the life cycle- as early as possible, especially in the first three years of life. One of the goals is to ensure that there is no increase in childhood overweight.

Mother's Absolute Affection: Programme for Promotion of Breastfeeding

"Mother's Absolute Affection" is a nationwide programme of the Ministry of Health and Family Welfare in an attempt to bring undiluted focus on promotion of breastfeeding and provision of counselling services for supporting breastfeeding through health systems. The programme has been named 'MAA' to signify the support a lactating mother requires from family members and at health facilities to breastfeed successfully.

Consensus Physical Activity Guidelines for Asians Indians

The consensus physical activity guidelines for Asian Indians are a result of the absence of physical activity guidelines specifically for Asian Indians. The genesis of their development lies in the fact that the international physical activity guidelines have been developed based on the data available for the Caucasians. With Asian Indians predisposed to non-communicable diseases at a much early age compared to the Caucasians, the consensus group on physical activity across India formulated these guidelines. These focus on exercise prescription for Indian adults, adolescents and children.

(2012). Consensus Physical Activity Guidelines for Asian Indians.Â Diabetes Technology & Therapeutics, 14(1), pp.83-98.

Consensus dietary guidelines for healthy living and prevention of obesity, the metabolic syndrome, diabetes, and related disorders in Asian Indians.

The consensus dietary guidelines for healthy living and prevention of obesity and other related disorders were developed considering the emergence of diet related non-communicable diseases in the country. These guidelines are applicable to Asian Indians in any geographical setting but are most applicable to individuals residing in the urban and semi urban areas. They focus on reduction in the intake of carbohydrates, preferential intake of complex carbohydrates and low glycemic index foods, higher intake of fibre, lower intake of saturated fats, optimal ratio of essential fatty acids, reduction in trans fatty acids, slightly higher protein intake, lower intake of salt, and restricted intake of sugar.

India Pledge

The India Pledge is a commitment to change food and beverage advertising on TV, print, radio and internet to children under 12. The commitment allows companies to advertise to under-12s only when the promoted products meet "strict science-based nutrition criteria". The Pledge was expanded and extended in 2016. It is voluntary.

Consensus Statement for Diagnosis of Obesity, Abdominal Obesity and the Metabolic Syndrome for Asian Indians and Recommendations for Physical Activity, Medical and Surgical Management

This consensus statement was developed to revise the guidelines for diagnosis of obesity, abdominal obesity, the metabolic syndrome, physical activity, and drug therapy and bariatric surgery for obesity for Asian Indians. These revised guidelines were formulated as the existing cut offs for overweight and obesity among Asian Indians was not appropriate as they are predisposed to developing obesity and its co-morbidities at lower cut offs. These guidelines are an evidence based outcome to be used countrywide to control the ever increasing burden of cardiovascular disease and type 2 diabetes.

Nutrient content list: Prevention of Food Adulteration (5th Amendment) Rules

On September 19, 2008, the Ministry of Health and Family Welfare implemented the Prevention of Food Adulteration (5th Amendment) Rules that mandate packaged food manufacturers to declare nutritional information on labels, even in the absence of a nutrition or health claim. The rules define which nutrients must be listed and on what basis (eg per 100g/per serving).
