Commercial Determinants of Noncommunicable Diseases in the WHO European Region

This report highlights the substantial impact of commercial determinants on noncommunicable diseases ([NCDs)[] in the WHO European Region. Nearly 7500 deaths per day in the Region are attributed to commercial determinants, such as tobacco, alcohol,processed food, fossil fuels and occupational practices. These commercial products and practices contribute to 25% of all deaths in the Region. The report's chapters systematically explore various facets of how commercial interests exacerbate NCDs and key strategies used by commercial actors to negatively influence NCD-related policies at the national and international level. The reportalso provides selected case studies from the Region to illustrate key strategies and outcomes of industry influence on health policies. The report then calls for urgent and coordinated action to address the commercial determinants of NCDs. It advocates for building coalitions based on the values of equity, sustainability, and resilience. Public health actors are urged to develop competencies in economic and legal frameworks, enforce transparency, and manage conflicts of interest effectively. The report underscores the need for robust financial reforms and strict regulation to curb industry power and protect public health. By implementing these strategies, the Region can accelerate progress towards global NCD targets and Sustainable Development Goals by 2030.

JA PreventNCD

Joint Action to Prevent Non-Communicable Diseases and Cancer (JA Prevent NCD) is a three year project funded by the EUforHealth 2021-2027 programme. It is designed to reduce the burden of cancer and NCDs across Europe by supporting member states (22 EU member states and Iceland, Norway, and Ukraine) to implement effective prevention strategies by focusing on both personal and societal risk factors. The project aims to reduce fragmentation and duplication of actions.

Guidelines for the prevention and of overweight and obesity

Approved in 2022, these guidelines aim to provide a framework for actions to prevent and combat overweight and obesity across government sectors. Recommendations include nutritional interventions, urban environmental modifications to promote physical activity, breastfeeding promotion, implementation of the Health Promoting Schools approach, and interventions on nutritional quality in collective catering and in food and beverage distributors among others. The document also includes guidelines for the diagnosis and treatment of obesity through a multidisciplinary model.

European practical and patient-centred guidelines for adult obesity management in primary care

This article aims to provide obesity management guidelines specifically tailored to GPs, favouring a practical patient-centred approach. The focus is on GP communication and motivational interviewing as well as on therapeutic patient education. The new guidelines highlight the importance of avoiding stigmatization, something frequently seen in different health care settings. In addition, managing the psychological aspects of the disease, such as improving self-esteem, body image and quality of life must not be neglected.

School Fruit, Vegetables and Milk Scheme

"Applicable since 1 August 2017, the EU school fruit, vegetables and milk scheme combines two previous schemes (the school fruit and vegetables scheme and the school milk scheme) under a single legal framework for more efficiency and an enhanced focus on health and educational. The scheme supports the distribution of products, educational measures and information measures. The scheme supports the distribution of fruit, vegetables, milk and certain milk products to schoolchildren, from nursery to secondary school. EU countries approve a list of products (in collaboration with their health and nutrition authorities) which will help achieve the schemes objective of helping children to follow a healthy diet. Priority is for fresh fruit and vegetables and for plain milk. In order to support a varied diet and/or specific nutritional needs, EU countries may also make processed fruit and vegetables such as juices and soups and certain milk products such as yoghurt and cheese, available. Additionally, under stricter conditions, milk-based drinks may be included." - EU Commission

Shared objectives for the improvement of nutritional characteristics of food products with particular attention to the population of children (3-12 years)

In 2004, the Self-Regulatory Code of Conduct on Commercial Communication was expanded to protect children's nutrition. The regulations apply for children aged 3–12 years old and indicate that marketing aimed at children should not encourage or imply 'unhealthy dietary behaviours' through product design and packaging. The Ministry of Health later developed guidelines to inform the implementation of the voluntary marketing code.

Healthy Stadia Network

"At Healthy Stadia, we encourage professional and amateur sports clubs, league operators, national and international governing bodies of sport to develop their stadia and sports facilities as health-promoting environments. We do this by supporting them to adopt a range of policies and practices in support of the health of their fans, their staff and the surrounding community. The definition we give to Healthy Stadia is: Healthy Stadia are... those who promote the health of visitors, fans, players, employees and the surrounding community... places where people can go to have a positive, healthy experience playing or watching sport."
