

# Kyrgyzstan

## Country report card - children

*This report card contains the latest data available on the Global Obesity Observatory on overweight and obesity for children, including adolescents (aged 5 to 18 years). Where available, data on common and relevant obesity drivers and comorbidities are also presented.*

*View the latest version of this report on the Global Obesity Observatory at <https://data.worldobesity.org/country/kyrgyzstan-116/>.*

| Contents                                                       | Page |
|----------------------------------------------------------------|------|
| Obesity prevalence                                             | 3    |
| Overweight/obesity by age                                      | 5    |
| Overweight/obesity by region                                   | 6    |
| Overweight/obesity by socio-economic group                     | 7    |
| Double burden of underweight & overweight                      | 9    |
| Insufficient physical activity                                 | 10   |
| Prevalence of at least daily carbonated soft drink consumption | 15   |
| Prevalence of less than daily fruit consumption                | 17   |
| Prevalence of less than daily vegetable consumption            | 20   |
| Mental health - depression disorders                           | 23   |
| Mental health - anxiety disorders                              | 26   |

**National obesity risk \*7/10** This is a composite “obesity risk” score (out of 10, the highest risk) based on obesity prevalence, rate of increase, likelihood of meeting the 2025 target, treatment indicator and childhood stunting levels. **Childhood obesity risk \*4.5/11** This is a “risk score” for each country’s likelihood of having or acquiring a major childhood obesity problem during the 2020s, taking account of current prevalence levels and risk for future obesity (based on stunting among infants, maternal obesity, maternal smoking, and breastfeeding rates).

\* Based on estimated data. For more information see Publications

## Obesity prevalence

Children, 2022-2024

|               |                                                                                                                                                                                                            |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Survey type:  | Measured                                                                                                                                                                                                   |
| Age:          | 7                                                                                                                                                                                                          |

**Notes:** Young people were asked to report the number of days over the past week during which they were physically active for a total of at least 60 minutes. The question was introduced by text defining moderate-to-vigorous physical activity (MVPA) as any activity that increases the heart rate and makes the person get out of breath some of the time, with examples provided. Findings presented on the Observatory show the proportions who report less than 60 minutes of MVPA daily. NB. National except Belgium (Flemish speaking region only)

**Definitions:** % reporting less than 60 minutes of MVPA daily

## Girls, 2022

**Notes:** Young people were asked to report the number of days over the past week during which they were physically active for a total of at least 60 minutes. The question was introduced by text defining moderate-to-vigorous physical activity (MVPA) as any activity that increases the heart rate and makes the person get out of breath some of the time, with examples provided. Findings presented on the Observatory show the proportions who report less than 60 minutes of MVPA daily. NB. National except Belgium (Flemish speaking region only)

**Definitions:** % reporting less than 60 minutes of MVPA daily

## Prevalence of at least daily carbonated soft drink consumption

### Boys, 2021-2022
