

Lithuania

Country report card - under-5s

This report card contains the latest data available on the Global Obesity Observatory on overweight and obesity for children under 5. Where available, data on common and relevant obesity drivers and comorbidities are also presented.

View the latest version of this report on the Global Obesity Observatory at <https://data.worldobesity.org/country/lithuania-124/>.

Riesgo nacional de obesidad *7,5/10This is a composite "obesity risk" score (out of 10, the highest risk) based on obesity prevalence, rate of increase, likelihood of meeting the 2025 target, treatment indicator and childhood stunting levels.

Riesgo de obesidad infantil *7/11This is a "risk score" for each country's likelihood of having or acquiring a major childhood obesity problem during the 2020s, taking account of current prevalence levels and risk for future obesity (based on stunting among infants, maternal obesity, maternal smoking, and breastfeeding rates).

* Basado en datos estimados. Para obtener más información, consulte Publicaciones.

Prevalencia de obesidad

0-5 years, 2021

■ Sobrepeso u obesidad

Edad: 0-5

Tamaño de la muestra: 68882

Referencias: Surveillance: Lithuania Child Health Monitoring Information System 2021

Notas: UNICEF/WHO/World Bank Joint Child Malnutrition Estimates Expanded Database: Overweight (Survey Estimates), May 2023, New York. For more information about the methodology, please consult <https://data.unicef.org/resources/jme-2023-country-consultations/> Percentage of children under 5 years of age falling above 2 standard deviations (moderate and severe) from the median weight-for-height of the reference population.

Definiciones (solo disponible en inglés): => +2SD

Double burden of underweight & overweight

0-5 years, 2021-2021

Tipo de encuesta:

Medido

Edad:

0-5
