Seychelles

Country report card - under-5s

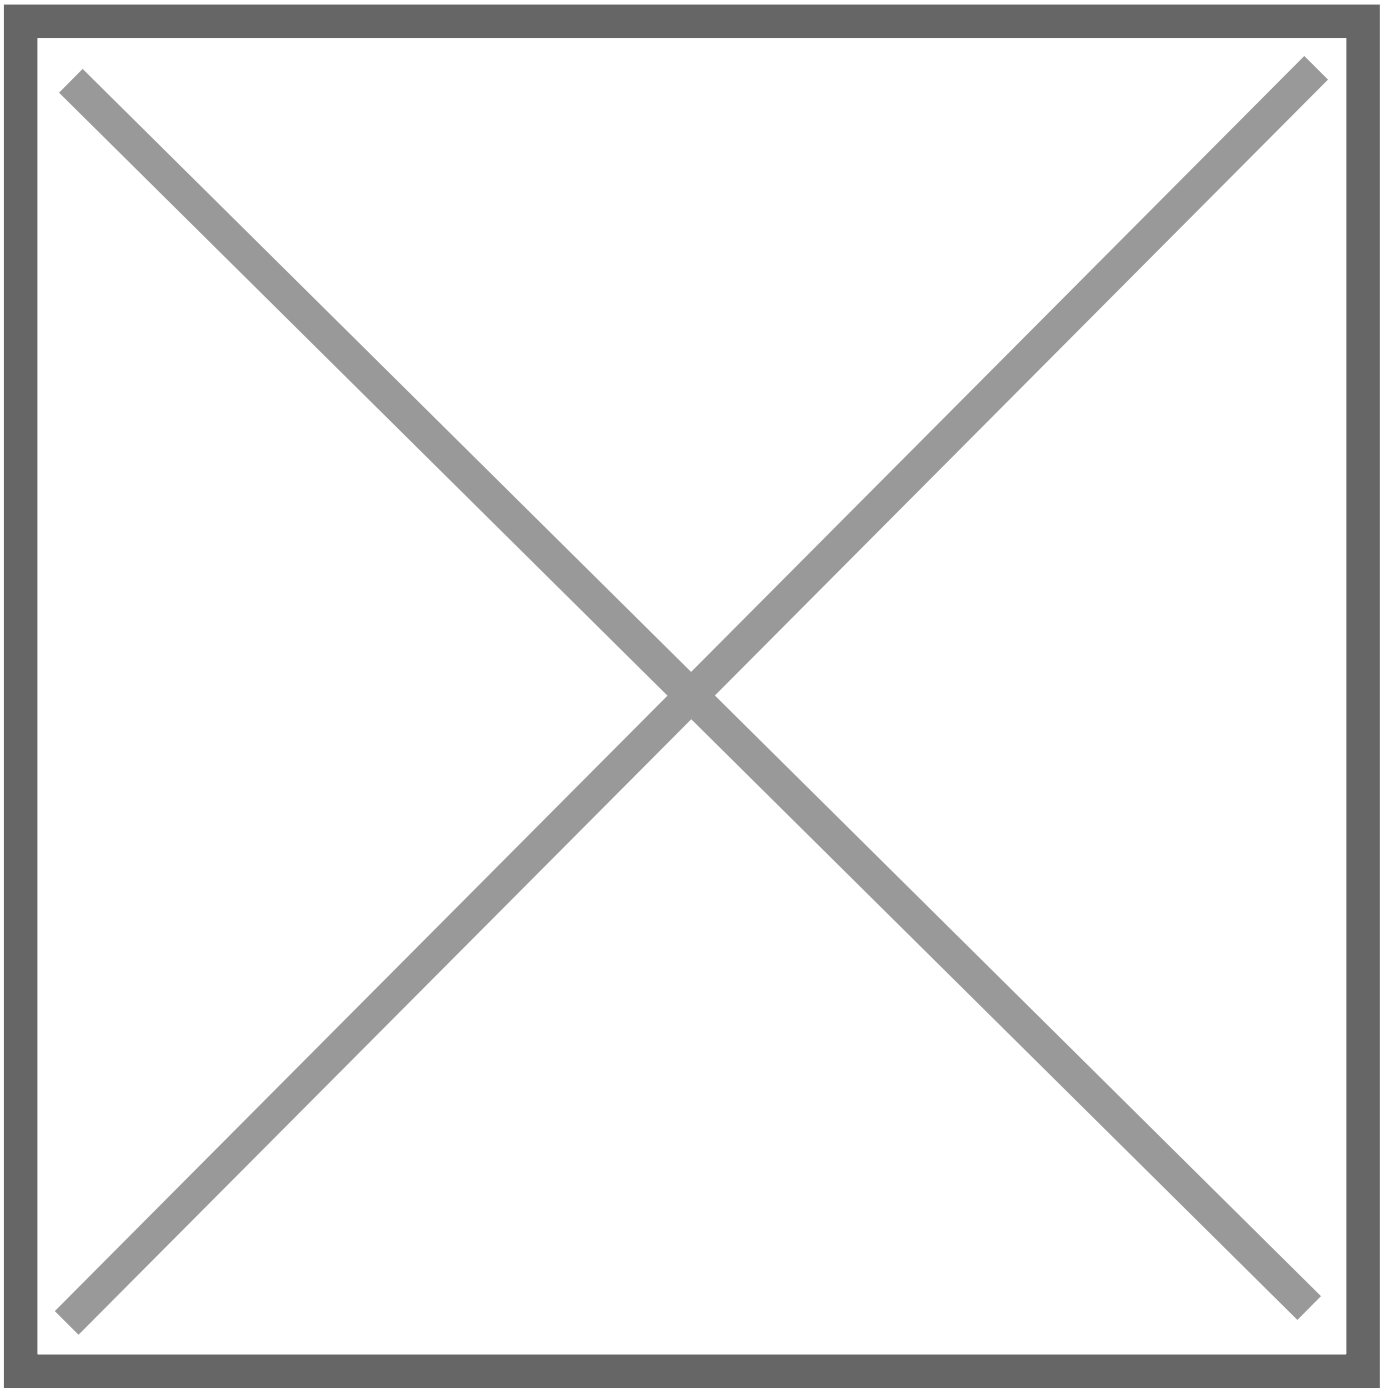

This report card contains the latest data available on the Global Obesity Observatory on overweight and obesity for children under 5. Where available, data on common and relevant obesity drivers and comorbidities are also presented.

View the latest version of this report on the Global Obesity Observatory at https://data.worldobesity.org/country/seychelles-190/.

Contents	Page
Obesity prevalence	3
Double burden of underweight & obesity	6

Obesity prevalence

0-5 years, 2012

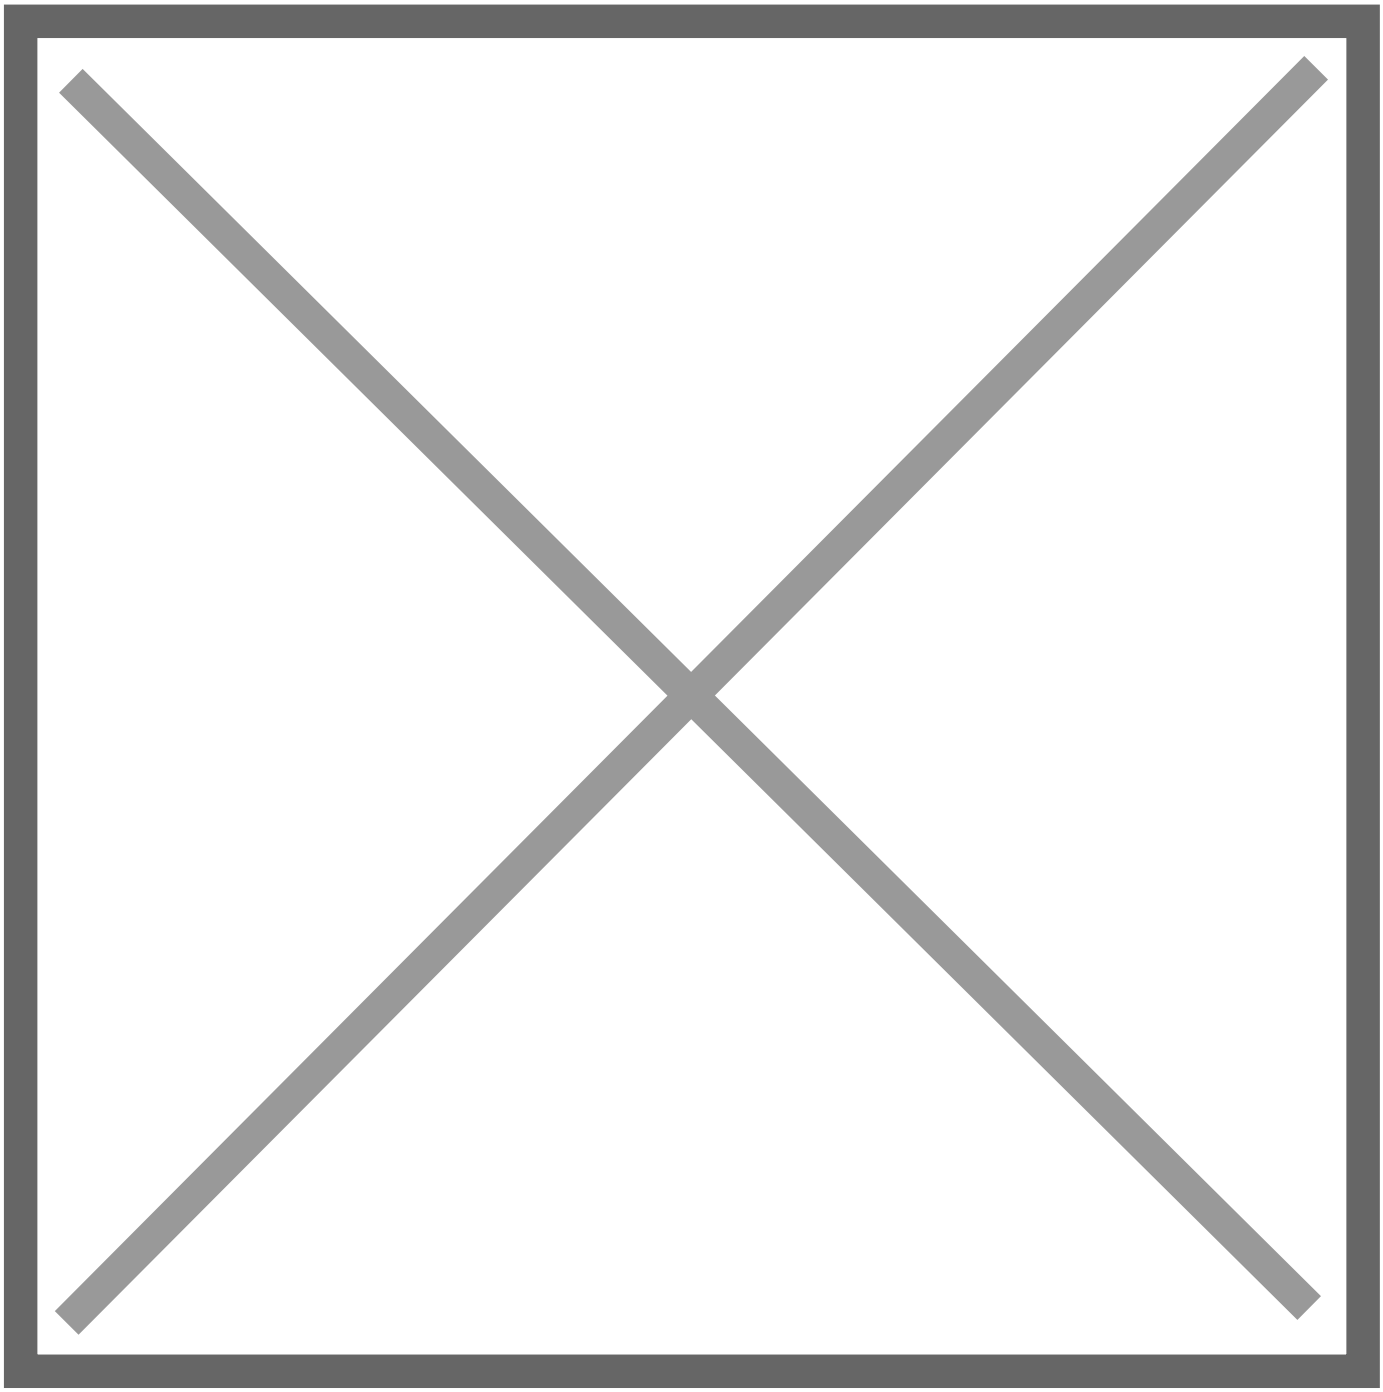

Age:	0-5
Sample size:	5008
References:	Other: The nutritional status and associated risk factors of 0-5 year old children in Seychelles. 7706 Med Health Project (thesis). Queensland, Australia: Griffith University, 2014.
Notes:	UNICEF/WHO/World Bank Joint Child Malnutrition Estimates Expanded Database: Overweight (Survey Estimates), May 2023, New York. For more information about the methodology, please consult https://data.unicef.org/resources/jme-2023-country-consultations/ Percentage of children under 5 years of age falling above 2 standard deviations (moderate and severe) from the median weight-for-height of the reference population.

Definitions:	=>+2SD

Double burden of underweight & obesity

0-5 years, 2012

Survey type:	Measured
Age:	0-5
References:	United Nations Children's Fund, Division of Data, Analysis, Planning and Monitoring (2025). Global UNICEF Global Databases: Overlapping Stunting, Wasting and Overweight (Survey Estimates), 2025, New York. For more information, visit: https://data.unicef.org/topic/nutrition/malnutrition/ [Accessed 06.08.25]

Notes:	The nutritional status and associated risk factors of 0-5 year old children in Seychelles. 7706 Med Health Project (thesis). Queensland, Australia: Griffith University, 2014.
Definitions:	Combined percentage of children under 5 years of age who are either wasted, stunted, or overweight (falling below -2 standard deviations from the median weight-for-height, falling below -2 standard deviations from the median height for age, or falling at or above +2 standard deviations from the median weight-for-height of the reference population)
Cutoffs:	WHZ <-2, HAZ <-2 and WHZ >+2
