Country report card - children

This report card contains the latest data available on the Global Obesity Observatory on overweight and obesity for children, including adolescents (aged 5 to 18 years). Where available, data on common and relevant obesity drivers and comorbidities are also presented.

View the latest version of this report on the Global Obesity Observatory at <https://data.worldobesity.org/country/united-states-227/>.

Data Resource Center for Child and Adolescent Health supported by the U.S. Department of Health and Human Services, Health Resources and Services Administration (HRSA), Maternal and Child Health Bureau (MCHB). Retrieved [19.05.2025] from [www.childhealthdata.org].
Sainmháiníthe (ar fáil i mBáirlín):	BMI categories for children and teens are based on sex-specific BMI-for-age percentiles from the CDC. BMI-for-age categories are: Overweight - 85th<95th percentile; Obese - =>95th percentile Parents typically overestimate height and underestimate weight of children younger than 10 years of age. Therefore, BMI for children under 10 years of age should be interpreted with caution. States A-M (inclusive)
