

Dél-Korea: Az elhízás előfordulása

Gyermekek, 2016-2017

Elhízás Túlsúlyos

Felmérés típusa:

Mért

Életkor:

10-18

Minta nagysága:

1256

Érintett terület:

Országos

Referenciák:

Lee JH. Prevalence of hyperuricemia and its association with metabolic syndrome and cardiometabolic risk factors in Korean children and adolescents: analysis based on the 2016-2017 Korea National Health and Nutrition Examination Survey. Korean J Pediatr. 2019;62(8):317-323. doi:10.3345/kjp.2019.00444

Definíciók (csak angol nyelven érhetők el):

BMI status was defined by sex- and age-specific percentiles: normal ($BMI < 85^{\text{th}}$ percentile), overweight ($85^{\text{th}} \leq BMI < 95^{\text{th}}$ percentile), and obesity ($BMI \geq 95^{\text{th}}$ percentile). Height, weight, and BMI were converted to z scores by using the 2017 Korean National Growth Charts.
