| Idade:                                    | 20+                                                                                                                                                                                                                                                                                                      |
| Área abrangida:                           | Nacional                                                                                                                                                                                                                                                                                                 |
| Referências:                              | Jeong, S.M., Jung, J.H., Yang, Y.S., Kim, W., Cho, I.Y., Lee, Y.B., Park, K.Y., Nam, G.E. and Han, K., 2024. 2023 Obesity Fact Sheet: Prevalence of Obesity and Abdominal Obesity in Adults, Adolescents, and Children in Korea from 2012 to 2021. Journal of Obesity & Metabolic Syndrome, 33(1), p.27. |
| Notas:                                    | Data from the Korean National Health Insurance Service health checkup database (covers 97% of the population). The missing 3% are Koreans in the lowest income bracket. The prevalence of obesity was standardised by age and sex based on the 2010 population and housing census.                       |
| Definições (disponível apenas em inglês): | WHO Asian cutoffs shown for BMI greater than or equal to 25kg/m² to allow comparison with non-Asian cutoffs. Data for overweight and obesity separately using WHO Asian cutoffs is not available in the paper.                                                                                           |
| Cutoffs:                                  | WHO Asia                                                                                                                                                                                                                                                                                                 |

Salvo indicação em contrário, o excesso de peso refere-se a um IMC entre 25 kg e 29,9 kg/m², a obesidade refere-se a um IMC superior a 30 kg/m².
