McDonald CM, Baylin A, Arsenault JE, Mora-Plazas M, Villamor E. Overweight Is More Prevalent Than Stunting and Is Associated with Socioeconomic Status, Maternal Obesity, and a Snacking Dietary Pattern in School Children from Bogotá, Colombia. *The Journal of Nutrition*. 2009;139(2):370-376. doi:10.3945/jn.108.098111.

Anmerkungen (nur in englischer Sprache verfügbar):

The study population is representative of low- and middle-income families from Bogotá, considering that the public school system enrolled 57% of all primary school children in the city by the end of 2005 and 89% of them were from low- and middle-income families. Child overweight or obesity was defined according to BMI cut-off points for sex and age corresponding to ≥ 25 in adults, following the International Obesity Task Force (IOTF) recommendations
