Piezīmes (pieejamas tikai angļu valodā):	Prevalence of overweight and obesity by Socioeconomic Level. Overweight and obesity were classified according to IOTF criteria, based on BMI measurements, with cutoff points for BMI based on an international reference population drafted from seven countries, specific for age and sex. Said cutoff points are a projection of the criteria proposed by WHO for diagnosing overweight (BMI of 25-29.9) and obesity (BMI of 30 or more) in adults.
