

Japón: Prevalencia de obesidad

Adultos, 2012

Tipo de encuesta:	Medido
Edad:	20+
Zona abarcada:	Nacional
Referencias:	Japanese National Health and Nutrition Survey 1973-2019. Available at https://www.nibiohn.go.jp/eiken/kenkounippon21/eiyouchousa/keinen_henka_shintai.html (Summary data available in English). Last accessed 04.09.24
Notas:	<p>*Since the surveys in 2012 and 2016 were conducted with a larger number of subjects than the regular surveys, weighting was applied to correct the difference in the number of households in each prefecture between the regular survey year and the 2012 and 2016 surveys in order to compare the results with the regular survey year, and the results were calculated as nationally adjusted values.</p> <p>A menos que se indique lo contrario, el sobrepeso se refiere a un IMC entre 25 kg y 29,9 kg/m² y la obesidad se refiere a un IMC superior a 30 kg/m²..</p>
