

Australia: Prevalența obezității

Adulți, 2022-2023

■ Obezitate ■ Supraponderal

Tip de studiu:	Măsurat
Vârsta:	18+
Dimensiunea eșantionului:	~12846
Zona acoperită:	Național

Bibliografie: Australian National Health Survey 2022-2023. <https://www.abs.gov.au/statistics/health/health-conditions-and-risks/waist-circumference-and-bmi/2022#body-mass-index-bmi-> (Accesed 03.01.2024)

Note (disponibile numai în limba engleză): Provision of height, weight and waist measurements were voluntary. Self-reported health status, height, and weight was collected for all participants. In 2022, 41.8% of adult respondents did not have their height and/or weight measured. For these people, height and weight were imputed using a range of information including their self-reported height and weight

Cu excepția cazului în care se specifică altfel, supraponderalitatea se referă la un IMC între 25 kg și 29,9 kg/m², obezitatea se referă la un IMC mai mare de 30 kg/m².
