Notas: Body Mass Index is derived from measured height and weight. In 2014-15, 26.8% of respondents aged 18 years and over did not have their height, weight or both measured. For these respondents, imputation was used to obtain height, weight and BMI scores. For more information see Appendix 2: Physical measurements in the National Health Survey.

A menos que se indique lo contrario, el sobrepeso se refiere a un IMC entre 25 kg y 29,9 kg/m² y la obesidad se refiere a un IMC superior a 30 kg/m².
