Noter (kun tilgængelige på engelsk): Body Mass Index is derived from measured height and weight. In 2014-15, 26.8% of respondents aged 18 years and over did not have their height, weight or both measured. For these respondents, imputation was used to obtain height, weight and BMI scores. For more information see Appendix 2: Physical measurements in the National Health Survey.

Medmindre andet er angivet, henviser overvægt til en BMI på mellem 25 kg og 29,9 kg/m², fedme henviser til en BMI på mere end 30 kg/m².
