J Obes Metab Syndr. 2020;29(1):12-17. doi:10.7570/jomes20002                                                                                                                                          |
| Definíciók (csak angol nyelven érhetőek el): | BMI status was defined by sex- and age-specific percentiles: normal (BMI<85th percentile), overweight (85th percentile≤BMI<95th percentile), and obesity (BMI≥95th percentile). Height, weight, and BMI were converted to z scores by using the 2017 Korean National Growth Charts. |
