**Notes:** Note, Physical activity not physical inactivity are reported. We report the % who DID achieve 60 minutes of Physical activity per day.

**Definitions:** Young people were asked to report the number of days over the past week during which they were physically active for a total of at least 60 minutes. The question was introduced by text defining moderate-to-vigorous physical activity (MVPA) as any activity that increases the heart rate and makes the person get out of breath some of the time, with examples provided. Findings presented here show the proportions who report at least 60 minutes of MVPA daily.
