

Австрия: Разпространение на затлъстяването

Възрастни, 2005-2006

Тип анкета:	Измерено
Възраст:	30-74
Количество на пробите:	1054
Обхваната зона:	Национално *
Референции:	Schwarz B. Abdominal obesity and cardiometabolic risk factors in Austria. RdM O&G 2007; 3: 65- 96
Забележки:	* It should be made clear though that the author of the above survey noted that although the survey population was well balanced and fairly representative, as they were based in a primary care setting, selection bias towards higher morbidity risk could exist. In contrast though volunteers to health screening programs may lead to a selection bias the other way. The author could not determine which effect dominated.

Освен ако не е посочено друго, наднорменото тегло се отнася до ИТМ между 25 kg и 29,9°kg/m², затлъстяването се отнася до ИТМ, по-голям от 30°kg/m².
