

Nepal: Overgewicht / obesitas, naar leeftijd

Kinderen, 2017

Type onderzoek:	Gemeten
Monstergrootte:	575
In aanmerking komend gebied:	Stedelijk
Referenties:	Prevalence and associated factors of childhood overweight/obesity among primary school children in urban Nepal. Available at: https://bmcpublichealth.biomedcentral.com/articles/10.1186/s12889-019-7406-9
Notities (alleen beschikbaar in het Engels):	A cross-sectional survey was conducted from May to October of 2017. Behavioral data were collected using a structured self-administered questionnaire with parents of children aged 6–13 years old in grades 1–5 studying in private schools of Lalitpur district in Nepal. Children with amputated body parts, or any acute or chronic health condition were excluded from the study as these conditions could affect their body weight. Those staying in a hostel away from their parents were also excluded as the questionnaire had to be filled out by a parent.
Cutoffs:	BMI-for-age-sex was calculated using WHO AnthroPlus
