**Notas:**

This report uses the revised International Obesity Task Force (IOTF) BMI reference values to classify overweight and obesity in children and adolescents aged 2–14 years (Cole and Lobstein 2012). The IOTF cut-off points are sex- and age-specific, and are designed to coincide with the World Health Organization's adult BMI cut-off points at the age of 18 years.

A menos que se indique lo contrario, el sobrepeso se refiere a un IMC entre 25 kg/m<sup>2</sup> y 29,9 kg/m<sup>2</sup> y la obesidad se refiere a un IMC superior a 30 kg/m<sup>2</sup>.
