

# WHO Americas region

## Regional report card - children

*This report card contains the latest data available on the Global Obesity Observatory on overweight and obesity for children, including adolescents (aged 5 to 18 years). Where available, data on common and relevant obesity drivers and comorbidities are also presented.*

*View the latest version of this report on the Global Obesity Observatory at <https://data.worldobesity.org/region/who-americas-region-3/>.*

| Contents   | Page |
|--|------|
| Obesity prevalence   | 3    |
| Insufficient activity  | 6    |
| Prevalence of at least daily carbonated soft drink consumption | 9    |
| Average daily frequency of carbonated soft drink consumption   | 11   |
| Prevalence of less-than-daily fruit consumption                | 12   |
| Prevalence of less-than-daily vegetable consumption            | 13   |
| Average weekly frequency of fast food consumption              | 14   |
| Mental health - depression disorders                           | 15   |
| Mental health - anxiety disorders                              | 18   |

## Obesity prevalence

### Children

Survey type:

Countries marked with a \* are using self-reported data.

Notes:

Different methodologies have been used to collect this data and so it is not strictly comparable.

## Boys

Survey type:

Countries marked with a \* are using self-reported data.

Notes:

Different methodologies have been used to collect this data and so it is not strictly comparable.

## Girls

Survey type:

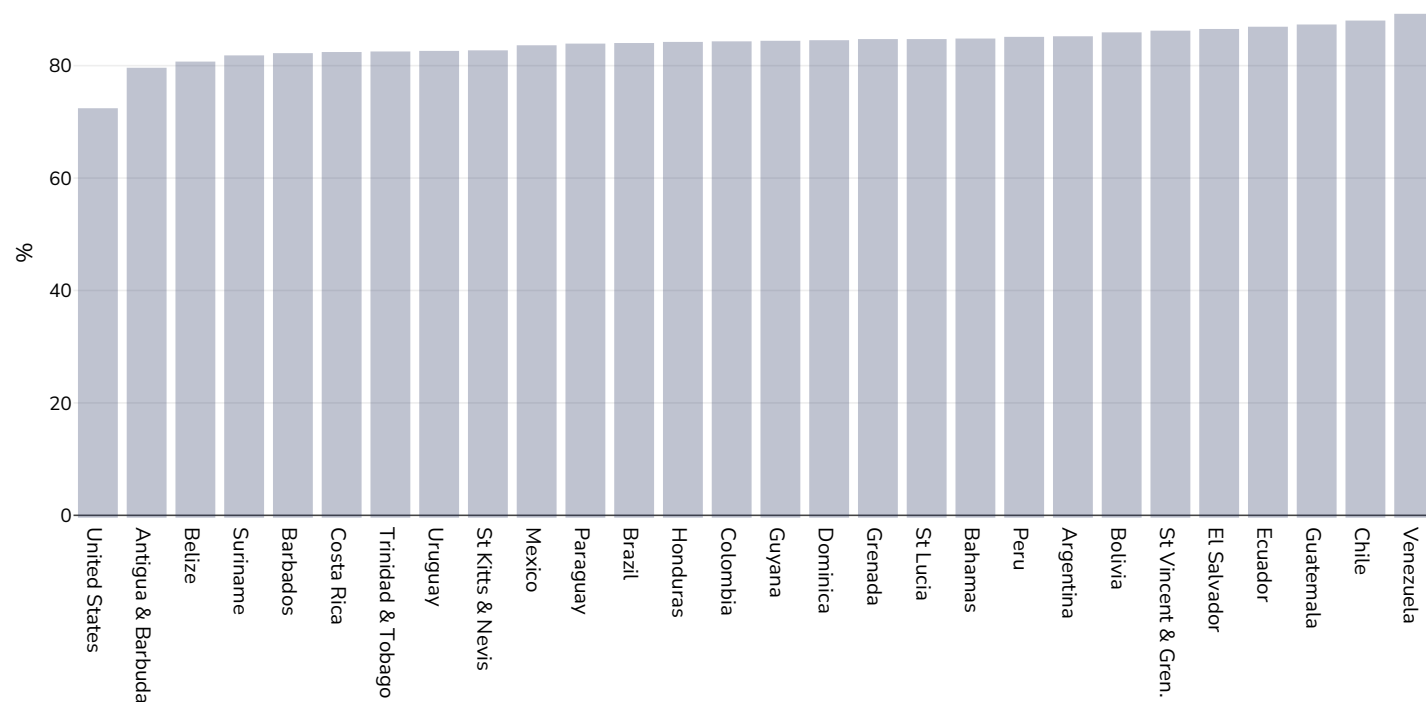

Countries marked with a \* are using self-reported data.

Notes:

Different methodologies have been used to collect this data and so it is not strictly comparable.

## Insufficient activity

### Children, 2016-2022

A focus on adolescent physical activity, eating behaviours, weight status and body image in Europe, central Asia and Canada. Health Behaviour in School-aged Children international report from the 2021/2022 survey. Volume 4. Copenhagen: WHO Regional Office for Europe; 2024. Licence: CC BY-NC-SA 3.0 IGO. Health Behaviour in School-aged Children study (2023), Data browser (findings from the 2021/22 international HBSC survey): <https://data-browser.hbsc.org>.

**Notes:** Young people were asked to report the number of days over the past week during which they were physically active for a total of at least 60 minutes. The question was introduced by text defining moderate-to-vigorous physical activity (MVPA) as any activity that increases the heart rate and makes the person get out of breath some of the time, with examples provided. Findings presented on the Observatory show the proportions who report less than 60 minutes of MVPA daily.

**Definitions:** % reporting less than 60 minutes of MVPA daily
